tools for **efficient** living →

Perfect for imperfect lighting scenarios, our **sensor mirrors** simulate natural sunlight so you can see subtle color variations in your makeup. No guesswork or surprises — just color-correct and flawless.

see yourself in the best light

tru-lux light system

Under the wrong lighting, makeup colors can fool you. At 600 lux and with a color rendering index (CRI) of 90, our tru-lux light system is more than twice as bright as the next best and contains the full color spectrum for the clearest, brightest, most color-correct view.

And our surgical-grade LEDs have been rated to perform like new after 40,000 hours — that's an hour a day, every day, for more than 100 years — in other words, you'll never have to change a bulb.

automatic on/off

Our sensor mirror has a motion sensor that detects when you are in front of it so it lights up automatically as your face approaches. Once in use, the sensitivity of the sensor increases so it won't turn off unexpectedly. Then after it senses you are finished, it will turn itself off — that way you never have to worry.

wall mount sensor mirror

Available in two models: One is rechargeable and can be used without a cord for up to 4 weeks on a single charge. Or install our hard-wired version directly into the wall — no charging necessary.

cordless

Connects straight to the wall with no messy cords hanging down.

telescopic swing arm

Sturdy stainless-steel arm provides smooth, effortless adjustability.

never change a bulb

Long-lasting LEDs won't burn out or dimish even after many years.

5x magnification

View your entire face at once in exceptional detail.

sensor on/off

Automatically lights up as your face approaches the mirror — no need to touch any buttons.

easy to match your design decor

Sleek yet durable, our sensor mirrors are available in a variety of stainless steel color finishes so they are easy to match to almost any interior design decor.

8" sensor mirror

Our sensor mirror lights up automatically as your face approaches. Its tru-lux light system simulates natural sunlight, allowing you to see full color variation, so you'll know when your makeup is color-correct and flawless. And unlike traditional makeup vanity mirrors' bulb lighting, our long-lasting LEDs won't burn out or diminish even after many years. Sensor mirror with touch-control brightness is rechargeable; sensor mirror SE plugs into the wall for continuous power.

wall mount sensor mirror

Our wall mount sensor mirror lights up automatically as your face approaches. Unlike many other makeup vanity mirrors, its tru-lux light system simulates natural sunlight, allowing you to see full color variation, so you'll know when your makeup is color-correct and flawless. The mirror's sturdy stainless-steel telescopic swing arm provides smooth, effortless adjustability. Rechargeable and hard-wired versions available.
